

ti SERIES CO₂ LASER DATA SHEET

MORE AVERAGE POWER FOR HIGH-SPEED MARKING, CUTTING AND ADDITIVE MANUFACTURING

Industrial CO₂ lasers engineered for high performance with higher average power across 9.3 μm , 10.2 μm , and 10.6 μm wavelength options.

FASTER PROCESSING SPEEDS, HIGHER RESOLUTION, AND COMPACT SIZE FOR OPTIMAL OEM INTEGRATION FLEXIBILITY

Maximum power and performance from an air-cooled CO₂ laser is the drive behind our ti Series technology. Using a patented hybrid-unstable resonator design creates a compact laser with excellent beam quality focused to the smallest achievable spot size, delivering the maximum power density on a work surface. The high performance RF circuitry designed specifically to match its compact resonator delivers fast rise times with outstanding square-wave performance. High power, fast pulsing capabilities, and exceptional optical quality are ideally suited for applications where rapid scanning or pulsing of the laser beam is required.

HIGH STABILITY (HS) MODELS

- Available in 60, 80 and 100 Watt models
- Well suited for selective laser sintering (SLS) or various polymers
- Excellent power stability, better than $\pm 2\%$
- Compact footprint and common beam exit across all power levels maximizes OEM integration flexibility

Unique 100 Watt fan cooled model offers an economical option for OEMs and system architects

DESIGNED FOR OEMs AND SYSTEM ARCHITECTS

Faster throughput

- Higher than average power rating across 9.3 μm , 10.2 μm , and 10.6 μm wavelength options
- Efficient laser energy delivery with fast rise/fall times

Adds flexibility to OEM machine design

- Similar compact footprint across 60, 80, and 100 Watt models
- Consistent beam exit height across all ti Series lasers makes power upgrades easier
- Choose the most effective and economical cooling option; available in fan or water-cooled models
- Expands laser processing capability with multiple wavelength options

Pulse Model For Heat-Sensitive Materials

- 100 Watts average power and more than 300 Watts peak power
- Broad material processing capability with 9.3 μm , 10.2 μm , and 10.6 μm wavelength options
- Minimizes Heat Affected Zone (HAZ) with $< 60 \mu\text{s}$ pulse rise times
- Cuts polymer films with a crisp edges and minimal lip melt, essential for modern electronics manufacturing

ti SERIES CO₂ LASER RECOMMENDED APPLICATIONS

GENERAL CUTTING

60, 80, and 100 W of power and fast rise/fall times ensures clean, crisp cutting. Multiple wavelength options enables cutting across a wide range of materials.

HIGH SPEED CODING

Easily applies permanent alpha numeric codes, bar codes, text, and expiration dates to a variety of packaging materials that will not smear or rub off

ENGRAVING

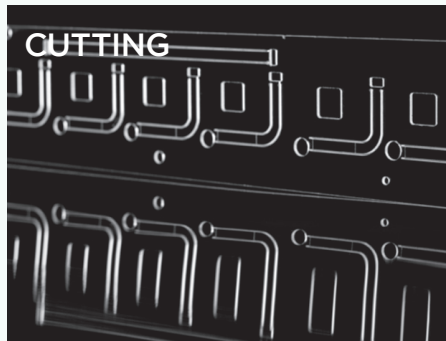

The high peak power is essential to minimizing heat build-up and avoid cracking when processing brittle materials such as alumina, ceramic and quartz glass. Excellent beam quality allows for very small features and clean symmetric holes.

3D SLS PRINTING

Excellent power density stability and a range of power levels make the ti Series High Stability CO₂ lasers the best choice for 3D printing equipment OEMs.

CUTTING

Precise cutting and engraving applications benefit from the ti Series High Stability CO₂ lasers, delivering excellent detail and clean cut edges.

MARKING

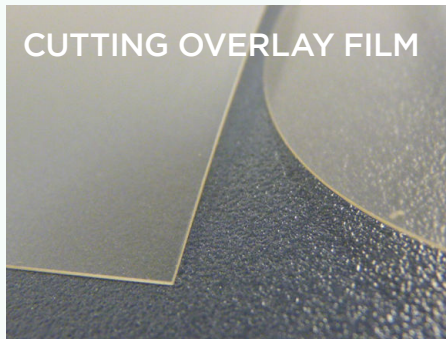

High power density stability and fast rise/fall times makes the ti Series High Stability lasers an excellent choice for sensitive marking applications, like denim.

CUTTING LEATHER

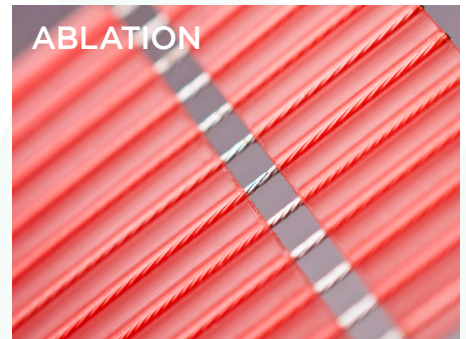

Hugh peak power delivers smooth, clean cuts with minimal charring or discoloration. Extremely effective for high fashion textile applications.

CUTTING OVERLAY FILM

Multiple wavelength options and excellent peak power to cut polymer films with crisp edges and minimal lip melt, essential for modern electronics manufacturing.

ABLATION

Optimized wavelengths and excellent power stability allow precise removal of insulation and coatings without damaging the underlying materials.
